07.3–1333 Determining fuel consumption by driving on the road

1. Fill up fuel tank with vehicle standing on level ground and in the presence of the customer.

2. Distance covered approx. 100 km, of which approx. 40 km motorway, approx. 60 km main roads and in towns.

3. After the run, fill up the fuel tank again and calculate fuel consumption.

Example:
Fuel consumption in liters/100 km

\[
\frac{\text{Quantity of fuel consumed}}{\text{km covered}} \times 100
\]
